NetApp AFF

Leading the future of flash

Key Benefits

- Unleash the power of your data with the industry's first end-to-end NVMe-based enterprise all-flash array that delivers up to 11.4 million IOPS and over 700PB effective capacity.
- Accelerate artificial intelligence and machine-learning applications with sub-200 μ s latency and massive 300GB/s throughput.
- Upgrade to a modern NVMe-based SAN infrastructure with a simple software upgrade¹ to support 60% more workloads or to cut application response time in half, without disruption.
- Minimize your data center footprint by storing 2PB of data in a 4U compact system with 5 to 10 times the SSD storage savings, delivered by inline data reduction technologies.
- Reduce power use by 15 times, rack space by 37 times, and cut support costs by 67%.
- Unify data management across SAN and NAS environments, both on the premises and in the cloud.
- Set up and configure a complete system and serve data within 10 minutes.
- Safeguard your data with best-in-class integrated data protection and seamless cloud backup and recovery.

The Challenge

As businesses go through the digital transformation, they must modernize their IT infrastructure to improve speed and responsiveness to support critical business operations. All-flash storage systems have been widely adopted to speed up typical enterprise applications. However, newer applications of data analytics, such as those in artificial intelligence (AI) and in deep learning, demand higher and higher performance that the first-generation flash systems cannot deliver.

In addition, it is also critical to offer enterprise-grade data management capabilities for a shared environment across on-premises data centers and the cloud. Unfortunately, many all-flash array solutions on the market today lack robust data management, integrated data protection, seamless scalability, and deep application and cloud integration.

The Solution

NetApp® AFF systems help you meet your enterprise storage requirements with industry's highest performance, superior flexibility, and best-in-class data management and cloud integration. Combined with the industry's first end-to-end NVMe technologies and NetApp ONTAP® data management software, AFF systems accelerate, manage, and protect your business-critical data. With an AFF system, you can make an easy and risk-free transition to flash for your digital transformation.

Designed specifically for flash, the AFF A-Series all-flash systems deliver industry-leading performance, capacity density, scalability, security, and network connectivity in dense form factors. With the addition of the new NVMe-based AFF A800, the AFF A-Series family extends enterprise-grade flash to AI and to machine learning. By combining low-latency NVMe solid-state drives (SSDs) and the first NVMe over Fibre Channel (NVMe/FC) connectivity, AFF A800 delivers below 200 μ s latency and a massive throughput of up to 300GB/s in a 24-node cluster.

As the industry's first all-flash arrays to provide both 100 Gigabit Ethernet (100GbE) and 32Gb FC connectivity together, AFF A-Series systems also support the NVMe/FC host connection, allowing customers to run 60% more workloads or cut the application response time by half.

Having been a leader in supporting high-capacity 15TB SSDs and multistream write (MSW) SSDs, AFF is leading again as the first all-flash system to support 30TB SSDs. You can further reduce your storage footprint with the high density of 2PB SSD storage in a 2U drive shelf and move toward an optimally efficient data center.

1. For select NetApp AFF A-Series models only.

AFF Benefits

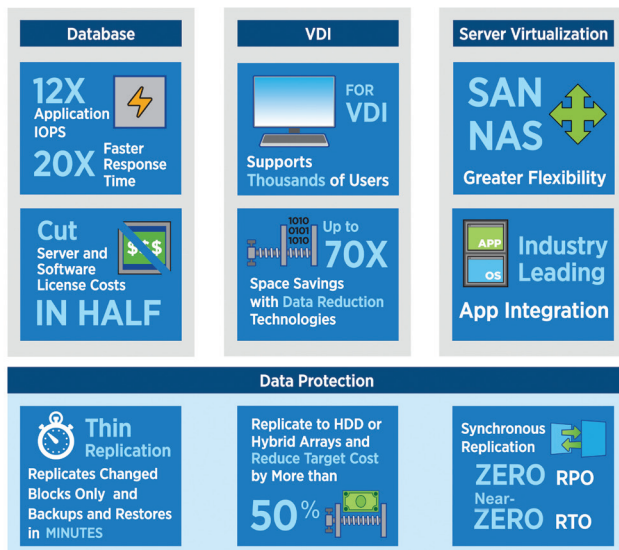

Figure 1) With rich data management capabilities, NetApp AFF systems help you cut business costs.

The newly refreshed AFF A220 platform for small and medium enterprise environments delivers 30% more performance than its predecessor to continue NetApp's leadership in this segment.

With AFF systems, you can:

- **Deploy flash everywhere with best-in-class cloud integration:**
 - You can move data and applications where they run best, either on the premises or in the cloud.
 - AFF offers the broadest application ecosystem integration for enterprise application, virtual desktop infrastructure (VDI), database, and server virtualization.
 - You can integrate flash into your infrastructure nondisruptively, eliminate silos, and scale out as your requirements grow.
- **Accelerate the speed of business while increasing operational efficiency:**
 - Speed up the most demanding workloads such as AI and deep learning with an AFF A800 system, which combines NVMe SSDs and NVMe/FC connectivity to provide an ultrafast end-to-end data path to your applications.
 - Consolidate all your workloads on AFF systems, which deliver up to 11.4 million IOPS at 1ms latency in a cluster with a truly unified scale-out architecture, allowing nondisruptive integration of new technologies such as NVMe.
 - Manage a massively scalable NAS container of up to 20PB and 400 billion files with a single namespace by using NetApp FlexGroup volumes, while maintaining consistent high performance with adaptive quality of service (QoS) and resiliency.

• Simplify IT operations while transforming data center economics:

- Reduce power consumption by up to 15 times and rack space by up to 37 times and slash support and performance-tuning costs to a third compared with hybrid systems.
- Get flash at the cost of HDDs, thanks to NetApp data reduction technologies, enhanced with new inline data compaction.
- Support all your backup and disaster recovery needs with a complete suite of integrated data protection and replication features.
- Secure your data and simplify key management on any type of drive with NetApp Volume Encryption (NVE), software-based at-rest data encryption that supports onboard and external key manager as well as multifactor authentication (MFA), and crypto-shredding.

Maximum Flexibility Future-Proofs Investments

With AFF, your investment is protected if your performance and capacity needs change or if your cloud strategy evolves in the future:

- AFF is Data Fabric ready, with proven cloud connectivity. The FabricPool allows you to move data automatically between AFF and the cloud with 20x the capacity on the premises tiered to the cloud to maximize performance and to reduce overall storage costs. It also dramatically simplifies hybrid-cloud backup and recovery with cloud-resident NetApp Data Availability Services.
- AFF systems eliminate performance silos in your data center. They seamlessly cluster with hybrid FAS systems, enabling workloads to transparently move between high-performance tiers and low-cost capacity tiers.
- You can seamlessly adapt as your needs change with the only all-flash array that allows you to intermix different controllers, SSD sizes, and new technologies so that your investment is protected.
- You can optimize data management for your enterprise workload environment with industry-leading application integration into Oracle, Microsoft, VMware, SAP, OpenStack, and much more.

Complete Suite of Integrated Data Protection

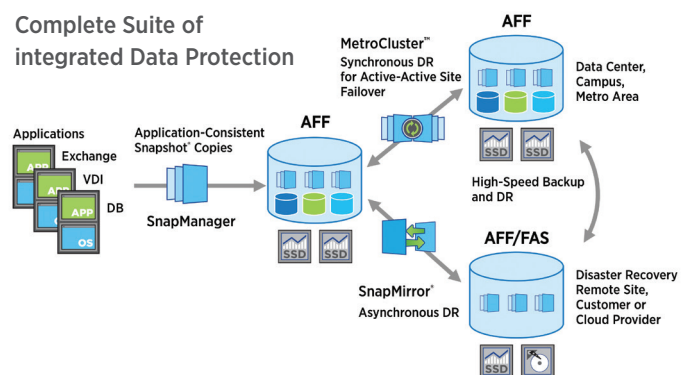

Figure 2) NetApp provides a full suite of integrated data protection and disaster recovery (DR) software.

All-Flash Performance Powered by End-to-End NVMe Technology

AFF systems are excellent for performance-demanding applications and mixed-workload environments that consist of, for example, Oracle, Microsoft SQL Server, MongoDB databases, VDI, and server virtualization. And with best-in-class performance, proven by SPC-1 benchmark based on the new end-to-end NVMe-based AFF A800, AFF systems are ready for any workloads:

- Combined with ONTAP's superior cloud integration and software-defined storage capabilities, AFF enables the full range of the data pipeline that spans the edge, the core, and the cloud for AI and deep learning, leveraging the same ONTAP data management.
- The end-to-end NVMe-based AFF A800 delivers 1.4 million IOPS at below 500µs latency.
- Built-in adaptive QoS safeguards SLAs in multiworkload and multitenant environments. It optimizes performance control dynamically with superior scalability of up to 40,000 workloads per cluster at LUN, file, and VVol levels.
- With the latest ONTAP release, AFF delivers up to 90% performance increase for Microsoft SQL Server with multichannel SMB.

Transform Your Data Center Economics While Simplifying Operations

With industry-leading performance and density, AFF systems can change your data center economics dramatically by reducing power consumption and rack space to a fraction of what a traditional HDD-based data center needs. AFF systems also significantly simplify storage management and cut support costs by eliminating performance tuning.

AFF comes with a full suite of acclaimed NetApp integrated data protection software. Key capabilities and benefits include:

- Native space efficiency with cloning and NetApp Snapshot™ copies (up to 1,023 copies are supported) to reduce storage costs and to minimize performance impact
- NetApp SnapCenter® software, which provides a unified, scalable and plug-in suite for application-consistent data protection and clone management that simplify application management
- Flexible and granular synchronous replication that provides zero data loss protection for an entire system with NetApp MetroCluster™ software, or for selected critical data with NetApp Synchronous SnapMirror® Synchronous whichever best meets your needs
- Ability to achieve regulatory compliance with NetApp SnapLock® software, which is enabled with integrated data protection and storage efficiency
- NetApp SnapMirror® replication software, which replicates to any type of FAS or AFF system—all flash, hybrid, or HDD, and on the premises or in the cloud—reducing overall system costs
- Seamless cloud-integrated backup and recovery with cloud-resident NetApp Data Availability Services

Figure 3) AFF is Data Fabric ready. You can easily move data between tiers and clouds.

AFF systems are built with innovative inline data reduction technologies, including inline compression, inline deduplication, and inline data compaction, that provide space savings of 5 to 10 times, on average, for a typical use case. Actual space savings of much higher than 10 times have been reported by our customers. Additional benefits of these technologies are as follows:

- The inline data compaction technology uses an innovative approach to place multiple logical data blocks from the same volume into a single 4KB block. It provides substantial space savings in addition to inline compression for database workloads that have relatively small I/O sizes. Combined space savings as high as 67:1 by using inline data compaction and inline compression together with an Oracle database have been observed.
- Inline compression has a near-zero performance impact. Incompressible data detection eliminates wasted cycles. With the latest ONTAP release, a further increase of 15%-20% storage efficiency can be achieved for select database applications.
- Inline deduplication increases space savings by eliminating redundant blocks. It is particularly effective for VDI workloads, for which it can achieve 70:1 reduction rates. The continued enhancements in the latest ONTAP software, including the expanded aggregate-wide inline and background deduplication and the auto-scheduled post-process deduplication, further increase space savings by up to 30% and help achieve those savings faster.
- As the first all-flash array to support SSDs with multistream write technology, and combined with advanced SSD partitioning in ONTAP, AFF further increases usable capacity by up to 42% for the same cost.

NetApp ONTAP and OnCommand® management software provides automated tools to further simplify management of storage operations:

- Set up your AFF system and start serving application data in less than 10 minutes with the SAN- and NAS-optimized pre-configurations and the fast provisioning workflow.
- Provision and rebalance workloads with confidence by monitoring clusters and nodes to assure performance headroom availability with OnCommand Performance Manager.
- Automate common storage tasks such as provisioning and data protection with fast, one-click automation and self-service by using OnCommand Workflow Automation.
- Import LUNs from storage arrays that are not based on ONTAP software directly into an AFF system to seamlessly migrate data from older storage arrays.

Get More Business Value with Services

NetApp Services and NetApp certified services partners collaborate with you to enhance your IT capabilities through a full portfolio of services that cover your IT lifecycle. To help you get the most value from your flash technology investment, NetApp offers:

- Assessment services to help evaluate the performance and efficiency of workloads across your heterogeneous environments
- Advisory services to help you determine the best workload candidates to move to flash
- Deployment and optimization services to prepare your environment and to deliver continuous operation of your AFF systems

In addition, you can optimize your NetApp systems with the predictive analytics and proactive support of NetApp Active IQ®. Fueled by NetApp's massive user base, its artificial intelligence and machine learning create actionable insights that help you prevent problems, optimize your configuration, save time, and make smarter decisions. Learn more at netapp.com/services.

Easily Unlock the Power of Your Data and the Power of Your Staff

Built on years of flash innovation and experience, NetApp AFF achieves high I/O at consistently low latency. And it does so without compromising on core enterprise requirements, such as robust data management, efficient data protection, and flexibility to respond to changing needs.

NetApp offers easy and flexible ways for you to deploy AFF systems. Standardized AFF configurations are offered through our channel partners as AFF Express Packs to simplify and to accelerate the purchasing process.

About NetApp

NetApp is the data authority for hybrid cloud. We provide a full range of hybrid cloud data services that simplify management of applications and data across cloud and on-premises environments to accelerate digital transformation. Together with our partners, we empower global organizations to unleash the full potential of their data to expand customer touchpoints, foster greater innovation and optimize their operations. For more information, visit www.netapp.com. #DataDriven
