

Steinway & Sons MARINE SPEAKER

The Steinway & Sons Marine Speaker brings the acclaimed Steinway & Sons sound performance to luxury outdoor applications, such as yachts, patios, and pool areas. Combined with the technologically outstanding Steinway & Sons amplifiers and sound processors, the Marine Speaker allows the highest level of sound quality from an outdoor loudspeaker.

STEINWAY & SONS SOUND PERFORMANCE FOR YACHTS AND POOL AREAS

Different to many compact outdoor speakers, the Steinway & Sons Marine speaker is designed as a full-range high-end-audio loudspeaker to effortlessly fill a yacht or pool outdoor area with best-in-class sound, from acoustic singer-songwriter recordings to dynamic dance music and large orchestral pieces.

Coupled with Steinway & Sons amplifiers and the speaker calibration in our sound processors, multiple Marine Speakers can be used together in different arrangements and always achieve the best sound performance in any environment.

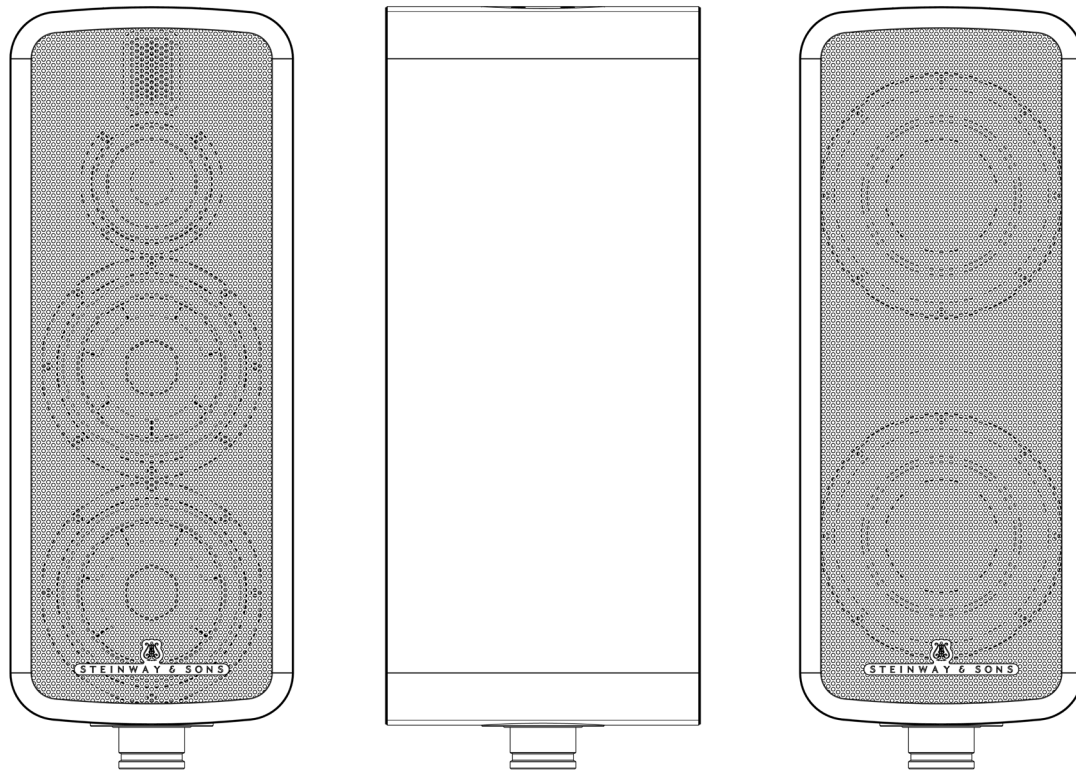

POWERFUL SOUND FROM FOUR WOOFERS

The Marine Speaker is equipped with advanced driver technology to provide the best sound quality and cut through the outdoor noise. Two 8" woofers per speaker

and two additional 10" passive woofers on the back allow deep and dynamic bass, even when free-standing outdoors. A dedicated 5" midrange driver ensures a clear and detailed midrange, important for singing voices and natural instruments. The Air Motion Transformer tweeter is a signature Steinway & Sons loudspeaker detail and reproduces exceptionally clear and detailed high frequencies, even at higher volume levels. In the Marine Speaker, a special mesh protects all drive-units.

DESIGNED FOR OUTDOOR WEATHER CONDITIONS

The design's rounded edges, white lacquer, and gold colored trim perfectly blend with yacht and pool environments, while the aluminum enclosure as well as the drive-units on the front are protected against salt water, spray water, splash water, and other outdoor weather conditions. The Marine Speaker is IP65 rated. Rigid mounting rings on top and bottom allow secure mounting to the ground on a sun-deck or terrace, for example with the optional tubular foot or using custom-made mounting constructions.

SPECIFICATIONS

Description:	Full-range outdoor loudspeaker
Tweeter:	Air Motion Transformer
Midrange:	1 x 150 mm / 5"
Woofers:	2 x 230 mm / 8", 2 x 260 mm / 10" passive radiators
